

The path to a garden that is...

- water efficient
- ocean friendly
- beautiful
- living

Ocean-friendly Garden classes (OFG)

**step 1:
take an
OFG class**

you'll learn about:

CONSERVATION

of water, fertilizers, and pesticides to reduce and improve runoff

PERMEABILITY

is a landscape's ability to slow and hold water; it is increased by changing surface materials

RETENTION

involves strategies that prevent wet-weather runoff to be used in the landscape and in many other ways

**step 2:
attend a
H-O-W**

A Hands-On-Workshop puts the concepts from the OFG classes to work.

These are for anyone, from the most experienced professionals to the everyday homeowner.

Learn outside the classroom and apply the management practices to your own home.

You'll spend time in the sun & get your hands dirty!

**step 3:
build your
own garden**

TAKE THE STEPS TO BUILDING A SUSTAINABLE GARDEN.
