Streamlining Water Surveys using Tablets/Software: Lessons Learned Navigating New Technology

Michelle Maddaus, P.E.

Lisa Maddaus, P.E.

William Maddaus, P.E.

Chris Matyas, Software Developer

Water Smart Innovations Conference

Las Vegas October 2, 2013

MADDAUS
WATER
MANAGEMENT

Agenda

1. Background & Need for the Software
2. Highlights of Tablet Technology
3. Overview of Water Audit Software
4. Case Studies of Audits with Training
 - City of Santa Barbara, California
 - Army Corps of Engineers Ft. Shafter, Hawaii
 - Abbotsford, Canada
5. Questions

1. Background & Need for the Software

- Maddaus Water Management has been doing audits for over 20 years, providing training since 2004 and using electronic tablet software since 2011
- Provide easy way to store data electronically

More time efficient	Reduce data entry time for complex sites
More sustainable	Eliminate use of printed paper
Safe Storage	Paper cannot get wet / lost during a site survey
“Real time” information in the field	Provide real time fixture data and organized list of water conserving projects
Data Collection Consistency	Software allows consistency between different staff

2. Highlights of Tablet Technology

- Three main types of tablet platforms:
 1. Windows
 2. iPad
 3. Android

Windows 8

- Not all tablets are created equal
- Not all tablets have the same battery life
- Not all tablets can run Microsoft Excel
- Not all tablets are the same cost \$\$
- Software written for one tablet cannot run on another

iPad

Online Resources Available

- Microsoft Windows “Surface Pro”: (Released February 2013)
- Apple “iPad”
- Google various “Android” Tablets (mfg. Samsung, etc.)
- Only option above that runs full version of Microsoft Office / Microsoft Excel is Windows Surface Pro
- Overview of all three technologies:
<http://reviews.cnet.com/best-tablets/>

Benefits of Windows based software

- Windows has the benefit of running Microsoft Excel
 - ✓ Allows Excel based report or file to easily be emailed to CII customer and/or agency following the completion of the audit
 - ✓ Allows files to run on a laptop in addition to a tablet
 - ✓ No need to do additional software training, most employees already know the basics of Excel
 - ✓ Excel based applications can easily add more graphs / tables for written summary audit reports

Lesson Learned #1 – All Stylus are not created equal

Does NOT
work well!

Rounded stylus tip is very difficult to use
Having a stylus port is useful so it does get lost

Pointed tip stylus “pen” much easier!

Lesson Learned #2 – An external battery charger is useful

External battery pack works for full day of audits

Multiple types of ports allows tablets, laptops and phones!

3. Overview of Water Audit Software

5 Basic Steps to the Water Audits Software MS Excel Application:

1. Enter Basic Site Data
2. Select Area with Water Using Equipment / Fixture (“Rooms”)
3. Enter Equipment / Fixture Data
4. Review List of Projects & Summary Data
5. Report Summary Graphs / Tables / Charts

Step 1: Enter Basic Site Data

Water Audit Tool v2.4

Start Audit

Getting Started

Troubleshooting

Facility Name

Santa Barbara Community College

Date Audited	May 9 2013		
Customer Billing Category	Institutional		
Green Business Type			
Average Monthly Water Use			
Meter Numbers			
Date Account Opened			
Water connection size (inches)			
Number of Employees Working in Building			

Contact(s)

Name				
Title				
Address				
Company				
E-mail				
Telephone				

Step 2 – Select Room/Area Type

[Back to Interview](#)

Rooms

Restroom	Laundry Room	Maintenance	Laboratory	Landscape Area	Other Room/Area
Food Service	Fitness Room	Janitorial	Exam Room	Pool/Spa Area	
Hotel Room	Locker Room	Mechanical	Classroom	Water Feature	Payback Analysis
Salon/Barber/Spa		Roof			Project List

Facility Name

Santa Barbara Community College

Room	Type	Description	Room #	Floor	Actions		
Room1	Classroom	Drama Music - Garvin	0	1	Edit	Copy	Delete
Room2	Food Service	Snack shop business communication	0	1	Edit	Copy	Delete
Room3	Other	Conference center	0	1	Edit	Copy	Delete
Room4	Laboratory	LRC break room	0	1	Edit	Copy	Delete
Room5	Classroom	Earth biology science	various	1	Edit	Copy	Delete
Room6	Laboratory	Physics	0	0	Edit	Copy	Delete
Room7	Classroom	ESL - English second language	0	1	Edit	Copy	Delete
Room8	Other	Student services	0	2	Edit	Copy	Delete

Step 3 – Enter Equipment / Fixture Data

Restroom Tank Toilet Showerhead FV Toilet Faucet Urinal Back to Rooms		Food Service Spray Valve Ice Machine Dishwasher Food Steamer Kitchen Faucet		Cooling Cooling Tower Vacuum Pump Distilled Water Swamp Cooler		Cleaning Autoclave Clothes Washer Janitorial Faucet		Landscaping Irr Controller Turf Area Shrub Area Hose Bib		Other Lab Faucet Other Faucet Pool / Spa Water Feature Other Device	
--	--	---	--	---	--	---	--	---	--	---	--

Rooms or Areas	RoomId	Description	Room Type	Room #	Floor/ Location	Building	Access	Use Lvl	Estimated #Visits/dy				
	3	Conference center	Other		1	Santa Barbara Comr		Low					
	Notes: Only staff 10-15 meetings per week - 2 semesters 17 weeks and 3-4 times per week during non peak												
Faucet	Position	Faucet Type	Manufacturer	Fill Sec	Gal Filled	Gallons per Minute	Leaking	Problem	Aerator	Automatic	WaterType	Listed Flow Rate	Delete
	1L	Restroom	Not Labeled	5.6	0.25	2.678571	No	None	Yes	No	Tap	2.2	
	Notes: For coffee												
Faucet	Position	Faucet Type	Manufacturer	Fill Sec	Gal Filled	Gallons per Minute	Leaking	Problem	Aerator	Automatic	WaterType	Listed Flow Rate	Delete
	1L	Kitchen	Delta Gerberit Kohler Moen Sloan T&S Zurn	6	0.25	2.5	No	None	Yes	No	Tap	2.2	
	Notes: High use												
FV Toilet	Position	Manufacturer	Toilet Type	Flush Time	Volume	Automatic	Leaking	Flush Time 2	Volume 2				Delete
	2L	American		1.6	11.7	5.35	No	No		0			
	Notes:												

Step 4 – Review Summary Projects / Data

Back to Rooms Project				
Projects				
Project Idea	Name	Description	Room	Delete
	Laundry Recycling	Recycling system installed but not functional	Laundry	Delete
	Ice defrosting for fish	Non standard industry practice for defrosting of fish	Kitchen	Delete
	Spray valves	Pre Rinse Spray Valves were old and need replacing	Kitchen	Delete
	Check dishwasher nozzles	Replace current dishwasher nozzles with efficient model	Kitchen	Delete
	Check cooling tower cycles	Tested via TDS meter and obtained 3 cycles	Roof	Delete

Step 5 – Create Payback Tables

Back to Rooms		Conservation Pr						
Add Project		Conservation Pr						
Project Name	Fixture	Existing Fixtures Total Current Water Use (gpd)	New Fixtures Total Estimated Water Use (gpd)	Number of Fixtures Replaced	Number of Days Item in Use	City Will Pay Entire Unit Cost	Uses Hot Water	
1 Install Spray Valve in EBS 223	Spray Valve	296 gpd	85 gpd	1	225	FALSE	TRUE	
2 Replace 25 Faucet Aerators in Physics Labs	Aerator	925 gpd	347 gpd	25	225	TRUE	TRUE	
3 Replace Ice Machine in 2nd floor Physics	Ice Machine	616 gpd	74 gpd	1	225	FALSE	FALSE	
4 Replace Clothes Washer Machine in Physics	Clothes Washer	12 gpd	5 gpd	1	225	FALSE	TRUE	
5 Replace Toilets in Student Center	FV Toilet	148 gpd	32 gpd	2	225	FALSE	FALSE	
6 Replace Hand Wash Sink Aerators Admin + Health	Aerator	52 gpd	11 gpd	7	225	TRUE	TRUE	
7 Install Spray Valve in Student Pastry Kitchen Pot Washing Station	Spray Valve	191 gpd	128 gpd	1	225	FALSE	TRUE	
8 Install Spray Valve in Cafeteria Kitchen	Spray Valve	409 gpd	128 gpd	1	225	FALSE	TRUE	
9 Add Faucet Aerators in Kitchen Sinks Used for Hand Washing	Aerator	74 gpd	9 gpd	3	225	TRUE	TRUE	
10 Fix Leaking Valve on Dishwasher in Cafeteria Kitchen	Fix Leak	13 gpd	0 gpd	1	225	FALSE	FALSE	
11 Fix Leaking Faucets in Teaching Kitchen 108 & JSB Café	Fix Leak	27 gpd	0 gpd	2	225	FALSE	FALSE	
12 Replace Showerheads in Men's and Women's Locker Rooms	Showerhead	5,666 gpd	2,552 gpd	92	225	FALSE	TRUE	
13 Add Spray Valve in JSB Café	Spray Valve	693 gpd	128 gpd	1	225	FALSE	TRUE	
14 Replace Faucet Aerators in Women's Locker Room	Aerator	1,304 gpd	555 gpd	2	225	TRUE	TRUE	

Case Study: City of Santa Barbara, California

- City of Santa Barbara Training and 7 audits completed:
 - 1 Large Laundry facility
 - 2 Large Retirement Communities
 - Water front Marina
 - 1 Large Hotel
 - Santa Barbara City College

Case Study: City of Santa Barbara

- Trained (2) two person teams
- Created new “short reports” - 2 page reports and report generation
- Learned tablet screen size makes a difference. Screen sizes too small can be a challenge to work with and slow down data entry.

Lesson Learned #3 – Screen size is important

- Ideal screen size is minimum of 1280x800.
- The new Microsoft Surface Pro 2 planned to be released in October 2013 will be 1920x1080.

Smaller screens are difficult for data entry.
Smaller is not always better!

Case Study: Ft Shafter, Hawaii

- Training of Army Corps Staff to conduct Survey of Army Base Facilities
- Base includes:
 - Military barracks
 - Irrigation
 - Offices
 - Golf course
 - Community center
 - Swimming pool
 - Kitchens
 - Bowling alley
 - Single family homes

Audit Training in Hawaii, July 2013

Case Study: Ft Shafter, Hawaii

- Trained a total of (5) two person teams.
- Two person teams are ideal as one can test the fixtures and one can enter the data
- Catch can tests can be used on unmetered landscape areas to help estimate irrigation water use

Irrigation Audit Training in Hawaii, July 2013

Lesson Learned #4 – Neck strap helpful with arm fatigue, safety of the tablet (dropped)

Case Study: Abbotsford, BC, Canada

Agriculture / Industrial audits

- Trained a total of 4 staff to conduct water surveys of agriculture and industrial sites.
- Surveys included:
 - Largest bell pepper grower in North America
 - Poultry processing plants
- Included many unique pieces of equipment

Group question – anyone want to guess what is in this picture?

Abbotsford, August 2013

Lesson Learned #5 – Use of photos in the field

- Photos help for verification of the model and serial number when back in the office
- Photos of the site are a nice addition to individualized site reports

Lesson Learned #6:

Tablets Allow for More Connection to Training Concepts & Efficiency Levels

- Training attendees learned data with real time results for fixture flow rates
 - Very helpful to reinforce levels of equipment efficiency
 - “I measured 10 seconds and 2.5 gpm. What did you get?”
 - Learn detail needed for calculations and photos
 - How to work efficiently in teams of 2 auditors for complex sites

Lesson Learned #7: Easy to Understand Results

- Keep it simple! 2-page short report for decision makers
- Customers provided with recommended list of projects:
 - Bathroom and other plumbing fixtures
 - Landscape improvements
 - Cooling tower adjustments
 - On-site laundry upgrades
 - Kitchen equipment (dishwashers, spray valves)
- Payback calculation results

SBCC Water Wise Survey Results

August 21, 2013

City of Santa Barbara Water Wise Survey & Incentive Program

RECOMMENDATIONS

1. **Faucets:** Fix or replace dozens of faucets in laboratories, locker rooms and cafes around campus. These 9 efficiency projects would save an estimated \$12,991 a year in utilities and cost only \$2,110 - paying back in just sixty days!

2. **Showers:** Replace men and women's locker room showerheads. This is the single largest water-saving project recommended. It would conserve over 3,000 gallons per day and comprise 44% of the proposed total annual cost savings.

3. **Appliances:** A new ice machine and upgrades to the large kitchen dishwasher would save an estimated 1,144 gpd. Replacing the Athletics Dept clothes washing machine would save another 170 gpd. These straightforward appliance exchanges would collectively pay back in less than one year.

Additional Recommendations

- Adjust all restroom toilets to flush at proper rates
- Replace toilets in Student Center with low-flow models
- Repair handheld shower nozzle in women's locker room

Water Savings **29%**
Equipment Cost **\$8,304**
Annual Cost Savings **\$35,346**
Payback Period **54 months**

OTHER NOTES

- Annual cost savings include reductions in City sewer charges & energy consumption by water heating equipment. Payback includes labor costs, does not incl. City Incentive
- See reverse for City Incentive available to help offset equipment costs

HOW INCENTIVES WERE CALCULATED

1. Estimated water savings
2. \$1.40 per hcf per year of water saved. (\$600/acre foot avoided cost of water)
3. Estimated project life expectancy
4. Incentives will not exceed half the installed cost of an approved measure
5. Maximum total incentives per site is \$15,000

Summary

- Electronic CII and Residential Survey Data Collection works!
- Tablets and Software can help with the following:
 - ✓ Improved efficiency and accuracy with real-time data collection
 - ✓ Reduces or eliminates data entry back in the office
 - ✓ Provides data collection consistency with field auditing staff
 - ✓ Allows audit calculation checks in the field
 - ✓ Supports easy creation of electronic payback tables of recommended projects
 - ✓ Easy report generation and/or ongoing inventory tracking
 - ✓ Facilitates roll-up of MS Excel database across facilities for businesses and conservation program planning
