A Utility's Look Into Water Restrictions vs. Water Budgets

Water Use Restrictions vs. Water Budgets in Austin, TX

David Turnage

Austin Water: an Overview

- Surface water utility
- 200,000 taps serving 900,000 customers
- ~ 90 to 220 MGD
- Tiered rate structure for residential
- Peak/Non-Peak for commercial

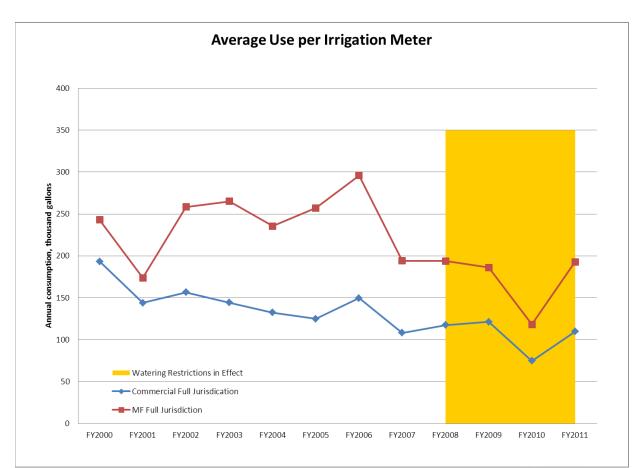

3

Water Restrictions

- Watering restrictions introduced late 2007 (wet year)
- Since 2006, GPCD has decreased 13% despite current drought
- Since 2009, 23 month of stage II restrictions have saved 9,449,691,383 gallons over Stage I restrictions.

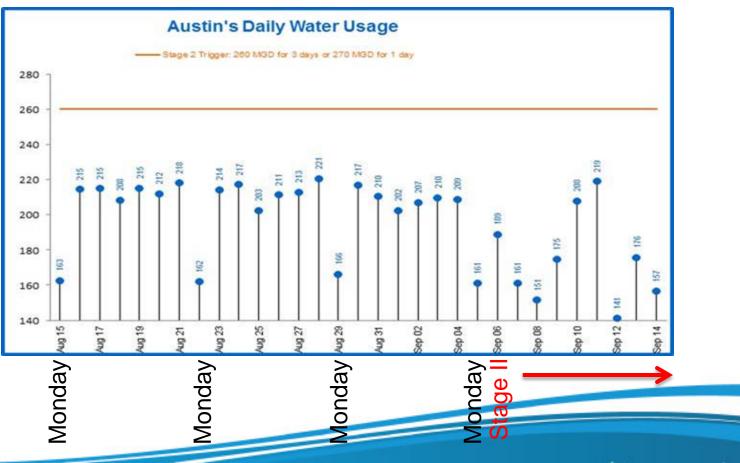

Water Restrictions

Ex: summer 2011 (twice per week schedule with no rain)

Irrigation spread throughout the week, no watering on Mondays

Origin of Alternative Compliance

- Austin City Code allows for alternative compliance with restrictions as approved by the director.
- Vocal group of landscape professionals claimed that the restrictions:
 - force fast applications of water.
 - don't let properties fully take advantage of rain events.
- City of Austin is open to efficient methods that produce similar or better water savings.

Creation of the Pilot Program

Water budget equation

- Warm season turf at low stress (coefficients from Ag extension)
- 70 year historic ET from Ag extension
- Rain and system efficiency are not part of the equation
- Quarterly budgets
- Total budget is affected by Drought Contingency Plan triggers

Historic ET x Tc x Qf x Sq footage x 0.623 = gallons per sq foot

Austin Alternative Irrigation Compliance Pilot Program Clearly Reliable

Creation of the Program

The "water budget" approach is meant to let participants:

- •"Bank" budgeted water longer periods after rain events
- Take advantage of native and adapted beds and increased irrigation efficiency
- •Concentrate water on high profile areas
- Water with flexibility!

Example Multi-Family Property

Irrigated Landscape Area

Irrigated Area 477,974 Square Feet

Application and Dismissal

- Lottery with emphasis on small properties
 - Limited application windows
 - Map of irrigated area (estimated square footage)
 - Pre inspection of irrigation systems
 - 63% of properties failed initial inspection
- Reasons for dismissal
 - Exceeding the budget two quarters or by 50% in any one quarter
 - Complaints made against the property
- Conservation staff provides final map and budget for accepted properties

Austin

Elements of Study

- Will we see similar savings ?
- Seasonal variation in performance?
- Effect on peak use?
- Performance differences based on property and/or management type?
- Increasing usage up to the budget?
- Does program entry date affect success?

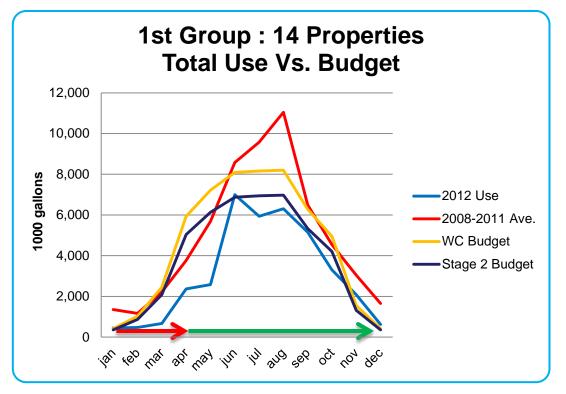

Historical usage under restrictions is within 2% of first 28 participants' allotted annual budget

1st Group of Applicants

- Entered into the program May 1st 2012
- Properties primarily managed by water management companies
- 10 Multi-family properties
- Vast majority of participants made it through summer, even with 15% reductions

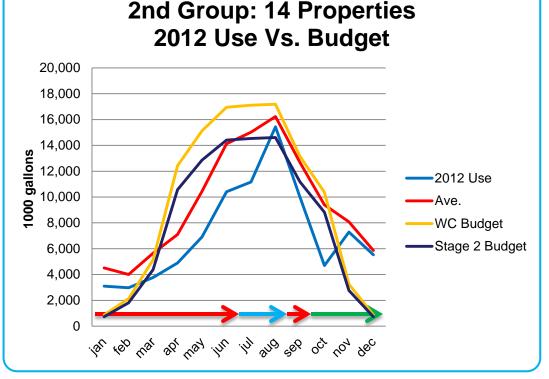

Restrictions

Pilot Program

2nd Group of Applicants

Austin

- Entered program beginning of October
- Properties managed by landscapers and irrigators (better representation)
- Expected for some properties to exceed fall budget based on historical pattern
- Higher ET and lower rainfall than average this fall

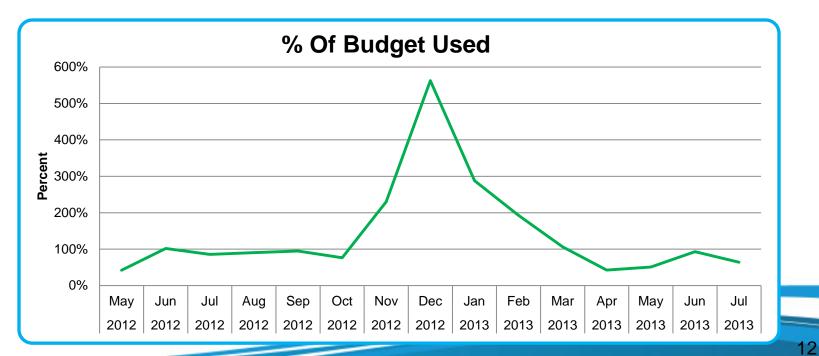

Stage IIStage IStage IIPilot ProgramRestrictionsRestrictionsRestrictions

Seasonal Effect on Success

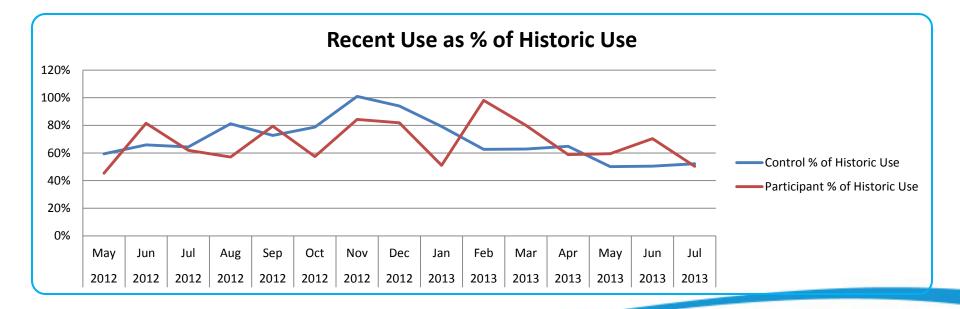

- Budget over winter months is greatly reduced due to turf dormancy.
- Percent over budget in winter months is high, but this does not represent a great amount of water.

Control Group

- Control properties have shown similar usage patterns as program participants
 - Program participants used 67 % of historic use
 - Control properties used 68 % of historic use
- Program participants used 90% of their combined budgets

Preliminary Observations

- Successful participant's use was less than their average, but control properties showed greater savings under restrictions
- 63% of successful participants managed by water management company (NOT representative of Austin)
- 94% of properties exited from the program managed by typical landscape company (representative of Austin)
 - We know the budget can work, but probably wouldn't on a large scale
- Multi-family properties used 82% of combined budget
- Commercial properties used 119% of combined budget
- Historically low users did not increase usage to "meet the budget"

Future of the Pilot Program

 More participants, and a better variety of participants, are needed to isolate trends

What we know is:

- Success is heavily dependent on "person in the field"
- Property type/property manager matters
- Participants need an informed plan to succeed
- The season and rain events heavily influence success
- Not much interest outside of original stakeholders

Potential Issues with Large Scale Implementation

- Many properties not following the watering schedule may erode the effectiveness of public enforcement of water restrictions
- Residential perception of the program
- How to enforce the budget? Rate based vs. fine based?
- Mapping of irrigated areas
- Variable ET rates and rain events

Questions?
